Associate Vice President - Applied Intelligence for Discovery (AI4D)

Associate Vice President - Applied Intelligence for Discovery (AI4D)

At Lilly, we believe in the talent of our workforce. One of the best ways to utilize and develop that talent is to use our existing workforce to fill new and/or open positions. If you are looking for a new position within Lilly, you can view and apply to open roles posted in the internal job posting system. You must meet the minimum qualifications outlined in the job description and have/obtain work authorization in the country the position is located in order to be considered. When applying internally for a position, your current supervisor will receive notification that you have applied to the position. We encourage employees to discuss the opportunity with their supervisor prior to applying.

Path/Level:
R10

The annual base salary for this position in country = United States of America ranges from: $235,500.00 - $392,500.00 USD

The job profiles on this job requisition are:

Research & Development-Biology-R10

Note: Roles are posted at the lowest level of a band, however, employees should search across all levels of the band to identify all opportunities. Employees hired on banded positions (ex: P1-P3, R-path, B1-B3, etc.) transfer at their current level, despite the level indicated on the job posting. For example, if a P2 candidate is selected for a P1-P3 banded position, the candidate will remain a P2 in the new role.

To understand a U.S. role's salary range, employees should visit the U.S. LillyNow Total Base Pay page or contact HR Solutions. For roles located in Puerto Rico and outside the United States, employees should contact local HR or HR Solutions.

The Opportunity
We are building something unprecedented — an AI foundation that will fundamentally change how drug discovery research is conducted.
The Associate Vice President of Applied Intelligence for Discovery (AI4D) will own the technical vision and execution for AI capabilities that enable discovery researchers across therapeutics areas to work in entirely new ways. You will partner with senior leaders across the organization to align these capabilities with research priorities, secure the resources to deliver on the vision, and drive adoption that turns platform potential into scientific impact. You will define the strategic direction for our AI and data science capabilities, ensuring they deliver measurable research acceleration while maintaining the rigor required in regulated drug development.
This role exists to drive a specific transformation: from discovery research that is computationally supported to discovery research that is computationally driven. That means building platforms where AI doesn't just accelerate existing workflows but enables fundamentally new ones.

Key Responsibilities

- Build and lead a multidisciplinary team spanning data science, ML engineering, and scientific software development
- Set technical vision and roadmap for AI/ML platforms serving discovery research, aligning

capabilities with enterprise priorities
- Own the full platform lifecycle — from identifying and integrating new AI capabilities to sunsetting legacy solutions, optimizing for overall portfolio performance as research priorities evolve
- Guide architecture decisions for end-to-end ML workflows: data pipelines, feature engineering, model development, deployment, and monitoring
- Serve as executive champion for AI capabilities, articulating value to senior stakeholders and influencing resource allocation
- Identify, establish, and manage strategic partnerships with technology providers and research institutions to expand platform capabilities
- Drive adoption of MLOps practices that enable reproducible, automated, and compliant AI development at scale
- Partner with technology and therapeutic area leaders to envision and execute on high-impact AI applications and translate research requirements into platform capabilities
- Work across organizational boundaries in a complex matrixed environment to align platform strategy with scientific priorities

Qualifications

- Advanced degree (MS/PhD) in Computer Science, Data Science, Computational Biology, or related field
- 10+ years experience in AI/ML or data science, with 5+ years leading teams

Additional Skills/Preferences

- Proven track record driving AI/ML from concept to scaled deployment in complex matrixed organizations
- Deep expertise in modern ML frameworks, MLOps practices, and cloud platforms (AWS/Azure/GCP)
- Demonstrated track record of driving AI/ML capabilities from concept through scaled deployment in complex, matrixed organizations — with evidence of measurable impact on business outcomes, not just model performance
- Ability to translate between scientific research questions and technical solutions
- Experience navigating cross-functional dynamics and influencing without direct authority
- Experience in pharmaceutical, life sciences, or healthcare industries
- Track record managing external technology partnerships and vendor relationships
- Platform architecture background — you think in systems and portfolios, not features and projects

Note: When applying internally for a position your current supervisor receives notification that you have applied to the position. We encourage employees to discuss the opportunity with their supervisor prior to applying.

Lilly is proud to be an EEO Employer and does not discriminate on the basis of age, race, color, religion, gender identity, sex, gender expression, sexual orientation, genetic information, ancestry, national origin, protected veteran status, disability, or any other legally protected status.

Our employee resource groups (ERGs) offer strong support networks for their members and are open to all employees. Our current groups include: Africa, Middle East, Central Asia Network, Black Employees at Lilly, Chinese Culture Network, Japanese International Leadership Network (JILN), Lilly India Network, Organization of Latinx at Lilly (OLA), PRIDE (LGBTQ+ Allies), Veterans Leadership Network (VLN), Women's Initiative for Leading at Lilly (WILL), enAble (for people with disabilities). Learn more about all of our groups.

Lilly may continue to provide U.S. visa sponsorship for current U.S. employees who meet the basic qualifications of the role and, prior to applying, have confirmed U.S. visa feasibility with Lilly's U.S. Immigration Team. U.S. employees do not include individuals completing an STA or LTA in the U.S. from abroad. Roles on the B path, S path, or that do not minimally require a bachelor's degree are not feasible for visa sponsorship.

#WeAreLilly

Lilly is proud to offer market-competitive employee benefits designed to empower you to live your best life. Employees may elect medical, prescription drug, dental and/or vision coverage for you and your family in one of two health plan options, enjoy best-in-class mental health support, and concierge services for orthopedic, cardiovascular, fertility care, and LGBTQ health navigation. We also support well-being with a fitness membership, health coaching, and wellness activities at no additional cost. Our retirement benefits are designed to help our employees feel secure in their financial future by including a defined benefit pension, a 401(k) match, and retiree medical coverage. We provide life and disability insurance for peace of mind and protection for you and your loved ones and paid time-off benefits to support you in life's moments that matter including personal illness, caregiver, bereavement, and other family needs, in addition to annual paid vacation and holidays. Lilly reserves the right to terminate or modify company-provided benefits at any time in its discretion. The company compensation structures are aligned to the location of hire. The United States pay range and benefits offering do not apply to any location outside of the United States.
